## SOLAR POWERED LIGHTBULB STRING

### INTRODUCTION

Solar lights work by using power generated by the solar panel to charge internal batteries. These batteries are then used to power the light. When switched on the lights automatically illuminate at night by using a light sensor. The duration of illumination will depend on the amount of sunlight and therefore charge received by the batteries.

### CONTENTS

Design may vary.

This is not a toy. Keep away from children and pets.

### CHANGE BATTERY

x4

### BATTERY SPECIFICATION

1x 1.2v AA Ni-CD rechargeable battery included.

### PROBLEM SOLVING

- 1 Do not immerse in water.
- 2 Check the battery and replace if necessary.
- 3 If problems persist contact customer services.

### FUNCTION

(OFF) Off  
(ON) On

10 LEDs

Outdoor use

No mains required.

Rechargeable batteries become less efficient with repeated charge-discharge cycles and the battery capacity reduces. If battery becomes less efficient try boost charging it by leaving in the off position for 3 to 5 sunny days to allow the maximum charge to the battery.

### POSITION

Position the solar panel to receive the maximum amount of sunlight.

Do not position under bright light as this will prevent the light switching on at night.
